

# Overnight Caisson Drilling

December 8-18, 2020

## What work is taking place?

Caisson drilling involves boring (or drilling) a hole into the ground down to more supportive bedrock, lifting in steel reinforcement (or rebar cage), and then pouring concrete. This creates reinforced concrete columns underground that will form structural piers to support the load of the elevated guideway structure above.

## Why overnight?

While most of this work is carried out during the day, some of the caissons must be completed at night when trains are not running, due to their proximity to the track.

## When

The work is scheduled to take place overnight between Tuesday, December 8 and Friday, December 18.

## Where

The work will take place at the northwest corner of the Davenport Diamond (just north of Dupont Street), where Barrie GO meets CP Rail. The site access point at Foundry Avenue will be frequently used.

## Hours

This work will be carried out during the night, between 11 p.m. and 6 a.m.

*\*Please note dates and times are tentative, and work could be rescheduled. To stay up to date, sign up for our Toronto West updates at [www.metrolinx.com/davenport](http://www.metrolinx.com/davenport) and follow us on twitter @GOExpansion.*

## What to expect

Nearby residents can expect noise, activity, and bright lights, as well as movement at the site access point at Foundry Avenue.
