

Barrier Installation (Overnight Work)

September 28 to October 23, 2020

Map: Site access point identified by green arrow →

Photos: Examples of barriers.

What work is taking place?

With trains running on the diversion track, construction on the elevated guideway can begin. For crews to safely be able to work on the west side of the rail corridor, barriers are being installed to separate the work zone from the live track (i.e. the diversion track). Haul trucks will deliver the barriers to site, where a boom truck (positioned on the rail) will place them along the west side of the diversion track. Barriers will be installed along the length of the rail corridor.

When

The work is scheduled to take place between September 28 and October 23.

*Please note these dates are tentative, and work could be rescheduled or extended.

Where

The work will take place along the entire length of the rail corridor, from north of Bloor Street to north of Davenport Road. Barrier installation will start at the CP diamond. From there, crews will work north towards Caledonia. Once complete, crews will start back at the diamond and work south towards Bloor. All site access points will be used: Bloor, Wade, Paton, Wallace, Antler, Campbell, Caledonia and Foundry.

Hours

This work will take place during night shifts. However, work will not take place every single night for the duration of the work period. When overnight work dates are known and confirmed, this notice will be updated accordingly on our website.

*Please note these times are tentative, and work could be rescheduled.

What to expect

The work being performed is significant. Residents can expect bright lights, loud noise and increased construction activity as crews use heavy rail equipment (haul trucks, boom truck, telehandler) to deliver and install the barriers.

Why overnight

Barrie GO train service has increased substantially as of September 8. As this work requires use of the diversion track, it cannot be carried out during the day while trains are running. As a result, this work must be performed overnight while trains are not running.
