

Caisson Drilling

November 2020 to July 2021

What work is taking place?

Caisson drilling involves boring (or drilling) a hole into the ground down to more supportive bedrock, lifting in steel reinforcement (or rebar cage), and then pouring concrete. This creates reinforced concrete columns underground that will form structural piers to support the load of the elevated guideway structure above. Drill rig pads/mats for the drill rig to sit on will be set up along the rail corridor.

When

The work is scheduled to begin in November 2020. It is expected to last for approximately nine months. The projected completion date for this work is July 2021.

Where

Most of the work will take place between the CP diamond and Wallace Avenue. Caissons will also be drilled just north of the CP diamond, just south of Wallace Avenue, at Bloor Street, and at Paton Road. The work will start north of the CP diamond and move south towards Antler Street. The work will then move to Wallace Avenue and work its way north towards Antler Street. The site access points at Foundry, Antler, and Wallace will be frequently used. **Please note the sequencing of activities could change.*

Hours

Most of this work will be carried out between the hours of 7 a.m. and 7 p.m. but will be extended as late as 11 p.m. during concrete pours.

**Please note that dates and times are tentative, and work could be rescheduled.*

What to expect

Nearby residents can expect noise and consistent activity, as well as mild vibration. Residents can also expect to see an increase in truck traffic. Concrete trucks will be on site every third day or so to pour concrete and delivery trucks will be on site as needed delivering steel for the rebar cages. There will be one drill rig (to drill holes) and one crane (to install rebar cages) on site for the duration of the work.
