

TRANSFORMING TRANSIT IN YOUR AREA

ONTARIO LINE TRANSIT PROJECT

Information as of May 20, 2020

Surveying and utility locate work along the Ontario Line corridor

What is the Ontario Line Transit Project?

The Ontario Line will bring nearly 16 kilometres of much-needed subway service to the City of Toronto, making it faster and easier for hundreds of thousands of people to get where they need to be each day. Initial plans for the line include 15 potential stations, including six interchange stations and 17 new connections to GO train lines and existing subway and streetcar lines.

What is happening?

To advance the Ontario Line project, Metrolinx will be surveying and identifying utility locations in the area where the project will be built. This work must be done to determine the approach for the construction of this important project, and will support the creation of foundation designs and other structural plans.

What to expect

- A one or two person crew will use monitoring equipment to locate utilities in the field, and apply paint markings on the ground to note physical location of underground utilities.
- A second crew uses surveying equipment to take measurements of the utility locations.
- Utilities are located within the public right of way.
- The limits of the road or sidewalk do not always match up with the limits of the public right of way. At times utility location markings will be visible on sidewalks, driveways and front lawns.
- Crews will avoid entering private property to the extent possible and will always work from municipal plans.
- Every effort will be made to minimize disruptions and expedite work.

Timing

- Work is continuing through May and June 2020.
- Work will occur between 8 a.m. and 5 p.m., Monday to Friday.
- Work could be rescheduled and delayed due to weather conditions or any unforeseen circumstances.

Thank you for your patience as we work to build this new project.
