

# Late Night (5 p.m. to 11 p.m.) Ground Improvement Work North of CP Diamond

April 19 to 23, 2021

## What work is taking place?

The ground north of the CP Diamond is not strong enough to carry the load of the future MSE wall. To strengthen the ground, we will drill small concrete columns that transfer the load of the MSE wall to stronger soil below. An MSE (mechanically stabilized earth) wall is like a big ramp, used to get trains to the height of the elevated guideway and back down to grade.

## When

Monday, April 19 to Friday, April 23.

## Where

Just north of the CP Diamond.

## Hours

Crews will be drilling concrete columns from approximately 5 p.m. to 11 p.m. However, prep work beginning as early as 7 a.m. will take place during the daytime.

## Why late night?

Some of the concrete columns are being drilled very close to the existing track, so the work must be done when trains are not running.

*\*Please note that dates and times are approximate, and work could be rescheduled.*

## What to expect

Nearby residents can expect loud noise, vibration, and lights. Foundry Avenue will be used to access the site.
