

Shoring Wall Installation at Wallace Avenue Rail Crossing - Night Work

Update: August 11 - 16, 2021

(Previously: August 10 - 13, 2021)

What work is taking place?

To facilitate construction of the new Wallace Avenue bridge, we need to build the south abutment - the concrete structure on the south side of the bridge on which the bridge deck will rest. The first step was drilling caissons. Next, we need to excavate and build the pile caps for the abutment. But in order to do that, we need to install two shoring walls - one on the west side of the rail corridor to protect the existing noise wall and one on the east side of the rail corridor to protect the diversion track. The shoring wall on the east side of the rail corridor, near the track, will be installed at night - when trains are not running to protect the track and workers.

When

August 11 - 16 *excluding Saturday and Sunday evenings (August 14 & 15)

Where

South of the Wallace Avenue rail crossing.

Hours

West shoring wall - from 8 p.m. to 11:30 p.m. (approximately).

East shoring wall - from 11:30 p.m. to 6 a.m. (approximately).

**Please note that dates and times are approximate, and work could be rescheduled. For regular construction updates, please sign up for our Toronto West weekly newsletter by visiting our website at www.metrolinx.com/davenport or follow us on Twitter @GOExpansion.*

Why night work

The shoring wall is being installed very close to the track and so the work must be carried out at night when trains are not running.

What to expect

Nearby residents can expect construction activity, noise, and lights. A drill rig, loader, and concrete trucks will be used to carry out this work.
