

# Gantry Crane Footing Installation at Wallace Avenue - Overnight Work

August 3 - 13, 2021

## What work is taking place?

We are installing footings for the gantry crane that will be used to erect girders for the elevated guideway. A footing is a strong base for the gantry crane to sit on during girder erection. Footings ensure the stability of the gantry crane used to lift the concrete girders for the elevated guideway into place. At Wallace Avenue, the gantry crane spans the width of the rail corridor, not including the diversion track. The footings on the east side of the rail corridor, to the west of the diversion track, are being installed overnight - from approximately 40 metres north of Wallace Avenue to just south of Campbell Park.

## When

August 3 - 13 (approximately).

## Where

North of the Wallace Avenue rail crossing, on the east side of the rail corridor (to the west of the track).

## Hours

Approximately 6 p.m. to 6 a.m.

## Why overnight work?

These gantry crane footings are being installed very close to the track. As such, the work must be done overnight when trains are not running to protect the track and the workers.

*\*Please note that dates and times are approximate, and work could be rescheduled. For regular construction updates, please sign up for our Toronto West weekly newsletter by visiting our website at [www.metrolinx.com/davenport](http://www.metrolinx.com/davenport) or follow us on Twitter @GOExpansion.*

## What to expect

Nearby residents can expect construction activity, moderate noise, and lights. Wallace Avenue will be used for worker and equipment access to the site. Equipment includes an excavator or backhoe that will install screw piles for the gantry crane footings.
