

Campbell Park - Tree Pruning and Protection

Early to Mid-September 2020

What work is taking place?

As part of the preparatory work for the Davenport Diamond Guideway project, the Siberian Elm trees in Campbell Park that overhang onto the rail corridor will need to be pruned to facilitate guideway construction. As these trees border directly onto the rail corridor - where the elevated guideway will be built and where there will be major construction activity - they will be protected.

For more information on this work and on how we are protecting these trees during construction, check out our tree pruning and protection fact sheet (available on our website).

When

The work is scheduled to take place in early to mid-September, following the end of bird nesting season. After this initial work, trimming will be done on an ongoing, as-needed basis.

Where

The work will take place within the GO Rail corridor and within Campbell Park, along the fence line that separates the two.

Hours

This work is scheduled to take place on weekdays from 7 a.m. to 7 p.m. Please note that dates and times are tentative, and work could be rescheduled.

What to expect

There will be noise from chainsaws and woodchippers used to prune the trees, as well as activity from arborists and crews performing the work.
