

Rail Corridor Vegetation and Tree Clearing

Fall 2021

Background

Work is underway to deliver the GO Expansion Program - the largest transit expansion in Canadian history.

To allow **fast, quiet, electrified, two-way, all-day service** that will come with GO Expansion, Metrolinx will build new track, signals, rail facilities and electrification infrastructure, modify and build bridges, and improve crossings across the core segments of the GO rail network.

Ongoing vegetation control inside rail corridors is essential to operating safe and reliable GO train service. GO Expansion requires an enhanced approach for trees and vegetation to create room for and protect new infrastructure, and to optimize corridor safety.

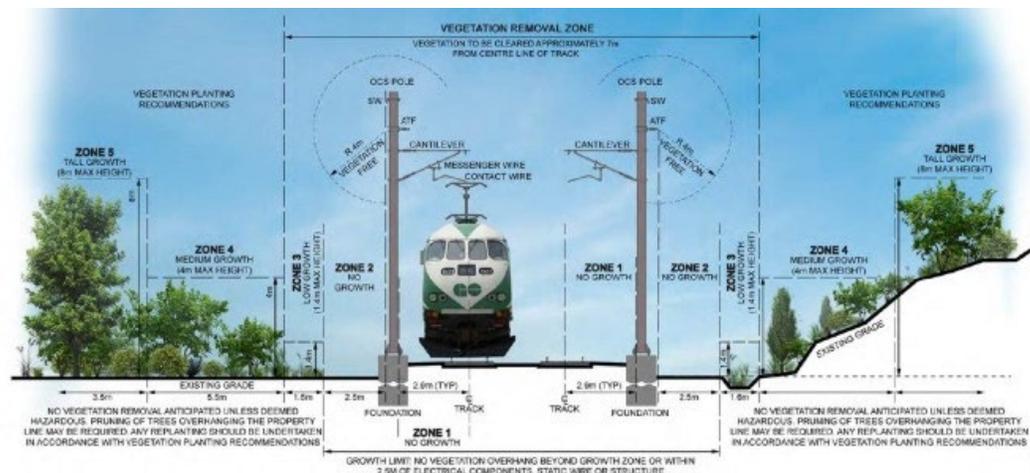

Our long-term strategy is based on other successful vegetation management programs that support regional rail services around the world.

Native trees removed as part of this work will be replaced within the City of Toronto through a compensation program based on the Metrolinx Vegetation Guideline (2020). The program will increase the tree count in the region.

What work is taking place?

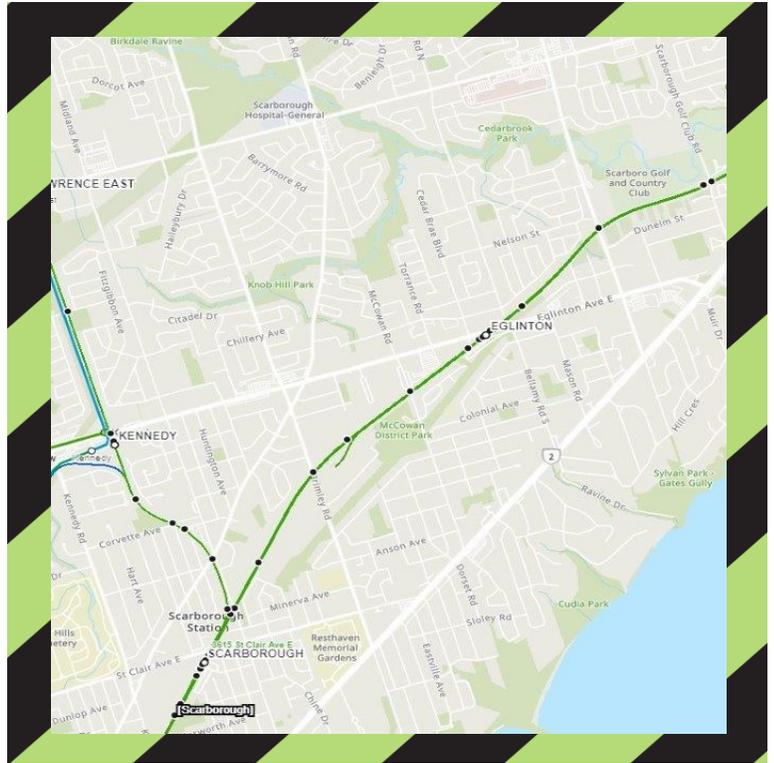

Crews will clear and remove some of the trees and vegetation located within the Lakeshore East Rail Corridor between Kennedy Road and Scarborough Golf Club Road.

Once cleared, growth control zones will be established to manage vegetation inside the corridors over the long term. A cross-section of the future rail corridor is shown below.

Timing and what to expect

- This work will begin in late November 2021 and crews will work across this stretch of corridor until approximately end of March 2022.
- These dates are tentative, and work may be rescheduled due to weather or unforeseen circumstances.
- Majority of work will take place between 7:00 a.m. and 7:00 p.m. on weekdays, and possibly on weekends.
- Work will be conducted as quickly and efficiently as possible to minimize disturbances, but residents and businesses near the corridor can expect to hear noise caused by trucks, chainsaws, woodchippers and other construction equipment related to this work.
- Residents may see crews in and around the corridor pruning and inspecting vegetation for the next few years.
- Residents may see dots on trees and blue stakes within the rail corridor for trees identified for removal or pruning.
- Invasive tree species will be chipped on site, while wood from native trees may taken off site for reuse.

Long-term local benefits to the community

- Limited frequency and intrusiveness of future vegetation maintenance.
- Future electrification of GO service – faster, more frequent service, quieter trains and better air quality.

Questions

If you have any questions about this work or would like to be included on future email communications, please call 416-202-3900, email torontoeast@metrolinx.com or go to metrolinx.com/subscribe.

Please respect all safety and exclusion measures installed to protect you.
Thank you for your patience as we work to transform the rail corridor in your area.
