

Cable Pulling and Containment: Weekend Nighttime Work January 28-30, 2022

January 24, 2022

What's going on

Crews will be at various locations within the Union Station East Corridor from Scott Street to Cherry Street beginning Friday, January 28 to Sunday, January 30 nightly.

How will you be affected

Overnight hours are from 10 p.m. to 6.a.m. Crews will be performing cable pulling and containment duties in preparation for new signal bridges. Heavy machinery such as vacuum trucks, excavators and boom trucks will be used. Metrolinx is working with subcontractors to ensure white noise backup beepers will be used wherever possible.

USRC Signalling System Project Overview

The USRC Signalling System Project (USRC SSP) is part of Metrolinx Signalling and Train Control Improvement Program designed to improve reliability of our signalling and train control systems and will replace the functionality of locally controlled towers at Cherry, Scott and John Streets.

Once completed, the new signalling system will reduce signal disruptions and recovery times while allowing operations to be under one control centre, thereby providing a more effective service.

Community Relations encourages all resident to subscribe to our weekly Toronto East Regional e-Newsletter. Please email us at torontoeast@metrolinx.com for details.
