

Signal Project Cable Installation between York and Peter Street

April 16 - 19, 2021

What's Going On?

Upcoming Weekend Work - Cabling Early Works:

The USRC Signalling System Project (USRC SSP) is part of Metrolinx Signalling and Train Control Improvement Program designed to improve reliability of our signalling and train control systems. As a part of this ongoing project, we will be conducting cable installation work.

Contact Us:

Or call us at 416-202-6911

Continuous hours of operation will begin on 10 p.m. on Friday evening and continue until 6 a.m. on Monday morning.

Dates may change according to conditions. Safety first.

How Will You Be Affected?

Heavy machinery such as vacuum trucks, excavators, jackhammers, boom trucks, and corridor lighting will be used. Metrolinx is working with subcontractors to mitigate impacts by using white noise backup beepers and redirecting lighting away from nearby windows when possible.

USRC Signalling System Project Overview

The USRC Signalling System Project Early works continue in preparation for new signal bridges at various locations within the Union Station Rail Corridor. Construction and enabling works are estimated to be completed in late 2022.

Community Relations encourages all resident to subscribe to our weekly Toronto West Regional e-Newsletter. Please email us at torontowest@metrolinx.com for details.
